

POCKETZIP™

Features

- New shaped pouch with one-side structure and a pocket open
- Easy-to-open using an opening tape (No scissors needed)

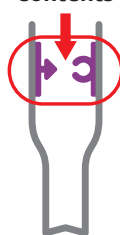

Merits of one-side structure

Traditional filling mechanism

Bottom filling contents

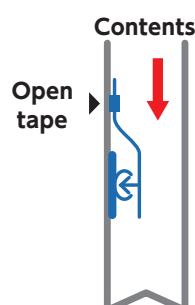

Top filling contents

◆ For top filling, a device to open and close a zipper is needed.

◆ For bottom filling, unnecessary load is added to a zipper part.

Filling a POCKETZIP™

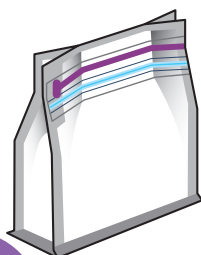

● Applicable to heavy, powder products.

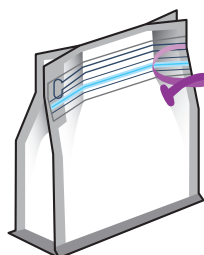

● Almost no load is added to a zipper part.

Use plan and the expected effect

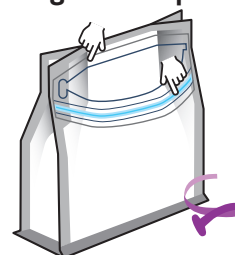

① Pulling the TAB of a built-in tear tape

② Easy-to-open

③ The mouth of the bag is like a pocket

Point!

- When opening an ordinary zipper pouch, the upper part of the notch will break.
- Even when opening the pouch, the POCKETZIP is excellent in pouch design because the upper part of the bag remains.
